### Time card system

Its impressive design, ease of use and its durability make fitvibe® excel the ideal unit for fitness and wellness centres. The operating principle is clear and self-evident. Each fitvibe® Excel is pre-equipped with a card system, which allows the commercialisation of the Fitvibe® excel by selling vibration minutes.

With the fitvibe® time card system you're able to load "vibration minutes" on a card. Only after inserting this card into a fitvibe®, vibrations will start. From that moment on the time on the card will count down. The countdown mechanism will only deduct minutes while the fitvibe® is vibrating (not during periods of rest).

The time card system facilitates you to earn your investment back and is in this way the perfect solution to obtain maximum return from your investment, with minimal effort.

The fitvibe® time card system is an accessory of Fitvibe® excel..
